

# Kyle van Niekerk

Frontend Developer with years of experience building websites & web applications with HTML, CSS and JavaScript. Looking for a remote position.

## EXPERIENCE

### Co-Founder & Frontend Developer | Moxa

March 2020 - Present

As the technical co-founder, I am responsible for building responsive websites and web applications for small to medium sized businesses. I am often asked to build based on a given design and expected to replicate it pixel-for-pixel. Occasionally I have to write custom scripts and use API calls to integrate with third party apps.

### Frontend Developer | Onyx Group Holdings

May 2019 - October 2019

My main responsibilities were designing and developing WordPress websites. I also had to manage and maintain the CMS, the plugins and the extensions. Occasionally I was tasked to design and build HTML emails for their weekly newsletters.

### Software Developer Intern | A24 Group

April 2019 - May 2019

This was an internship position at a major Health Tech company. I was responsible for maintaining the MySQL databases and reviewing code written by Senior Developers.
